

Pediatric Vaccination

WHAT DO I NEED TO KNOW ABOUT COVID-19 PEDIATRIC VACCINATION?

All children who are six months and older can get vaccinated against COVID-19.

Learn more at:
www.nyceal.org

Why should my child get vaccinated against COVID-19?

- Contagious variants have caused children to get very sick, be hospitalized, and die from COVID-19.
- Getting children vaccinated helps protect those around them.

How do we know the vaccine is safe and works for children?

The vaccine has been given to millions of children in the U.S. and has prevented thousands of hospitalizations and deaths.

What are the COVID-19 vaccine side effects?

- Children experience similar side effects as adults. Side effects usually last for one to two days.
- Risks from COVID-19 infection are much greater than side effects.

My child had COVID-19. Should they still get vaccinated?

- Yes, they should still be vaccinated.
- Vaccination provides extra protection, reducing the risk of getting COVID-19 or of getting very sick.

My child has a health condition. Should they still get vaccinated?

- Yes, they should still be vaccinated.
- Children with diabetes, obesity, and other health conditions should get vaccinated since these can increase their risk of getting very sick from COVID-19.

Where can I get the COVID-19 vaccine?

Contact your child's health care provider or go to <https://vaccinefinder.nyc.gov/> to find a location near you.
